IN MEMORIAM

Dr. Paolo Franzosini, Professor of Physical Chemistry, University of Pavia, Italy, and the Editor of this volume, passed away on January 24, 1986 at the age of 56.

Born in Trecate, near Turin, he received his university education while on a prestigious scholarship at the Collegio Ghislieri of the University of Pavia, graduating with honors in 1952. He then spent two years as a post-doctoral research assistant with Professor Clusius in the Department of Physical Chemistry at the Federal Polytechnic Institute of Zurich. In the years 1955-1960 he served as Assistant Professor at the University of Pavia, and had been promoted to the rank of Associate Professor at the early age of thirty. In 1965 he moved to the University of Camerino as Professor and Chair of Physical Chemistry. In 1968 he was back at his alma mater as Professor of Electrochemistry, and in 1980 as the Chair of Physical Chemistry. In 1979 he served as Visiting Professor at the University of Mogadiscio, Somaliland, and in 1981 at the University of Michigan in Ann Arbor.

In the thirty years of scientific activity, he published over 100 papers, mostly in the field of thermodynamics and thermochemistry of molten salt systems. He made significant contribution to the Atlas of Miscibility Gaps in 1968, and to the Atlas of Phase Diagrams in 1973 on molten salts with organic anions. In 1980 he coedited, with Professor Sanesi, Volume 28 of IUPAC's Chemical Data Series on Thermodynamics and Transport Properties of Organic Salts. In the years 1978-1984 he was member of IUPAC Commission on Thermodynamics. In 1982 he joined the Solubility Data Project and served as the National Representative of Italy to IUPAC's Commission on Solubility Data. At that time he was appointed Editor of the present volume.

He has not seen the completion of this volume. Thanks to the devotion and expertise of his colleagues, Professors Ferloni, Schiraldi and Spinolo of the Department of Physical Chemistry, University of Pavia, this volume, the final major work of Professor Franzosini, was brought to completion.

Paolo was an interesting intellect with a broad European humanitarian culture. He was a Rotarian from an early age, president of the Rotary Club of Pavia, and served in the distinguished position of Rotary District Governor in 1982-3.

Through the generosity of the Franzosini family, it has been possible for the Solubility Data Commission to establish the Paolo Franzosini Endowment Fund, the proceeds of which to assist young scientists in their association with IUPAC's Solubility Data Project.

We are all diminished by his passing.

A.S. Kertes  
Editor-in-Chief

Jerusalem, March 1988
